Office Action Summer	10/712,768	PROCHAZKA ET AL.			
Office Action Summary	Examiner	Art Unit			
	James A. Fiorito	1754			
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).					
Status					
Responsive to communication(s) filed on 2a) ☐ This action is FINAL.					
Disposition of Claims					
4) Claim(s) 1-43 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) is/are allowed. 6) Claim(s) 1-43 is/are rejected. 7) Claim(s) is/are objected to. 8) Claim(s) are subject to restriction and/or election requirement.					
Application Papers	•				
 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. 					
Priority under 35 U.S.C. § 119					
 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of: 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. 					
Attachment(s) 1) Notice of References Cited (PTO-892) 2) Notice of Draftsperson's Patent Drawing Review (PTO-948) 3) Information Disclosure Statement(s) (PTO/SB/08) Paper No(s)/Mail Date 4/11/05.	4) Interview Summary Paper No(s)/Mail D 5) Notice of Informal F 6) Other:	ate			

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 12-22, 25-26, 29-41, and 43 are rejected under 35 U.S.C. 102(b) as being anticipated by Duyvesteyn (WO 01/00530).

Duyvesteyn teaches the processing of aqueous titanium solutions to a TiO₂ rutile pigment. An aqueous titanium chloride or titanium oxychloride solution is prepared, the solution is evaporated at preferably 200 to 250°C, eg by spray drying, and the resulting TiO2 is calcined (Page 10). The spray hydrolysis produces hollow thin-film spheres or parts of spheres having a diameter in the range of about 1 to about 100 microns. The calcination temperature lies between 500 and 1100°C (Page 8), calcination duration is 2h in the examples. Claim 26 claims a calcination time of less than about two hours; since the term "about" introduces certain vagueness, the calcination duration of 2h is regarded as falling with the range claimed in claim 26 (Page 9). Following calcination, the TiO2 is milled and washed. Additionally, chemical control and seeding agents for control of physical and mineralogical characteristics may be introduced in minor quantities into the titanium solution, such as chloride salts of lithium, sodium, potassium or tin (Page 6). Since all other process features are identical, it is regarded as implicitly disclosed, that an open network of rutile crystals will result, that a brookite phase will be

Application/Control Number: 10/712,768

Art Unit: 1754

formed as a intermediate during calcination, and that the crystallites will have a particle size as claimed in claims 37 to 39 (Page 7). Duyvesteyn teaches recycling of the aqueous salt solution (Figure 2)

Claims 1-8, 12-23, 25-27, 29-43 are rejected under 35 U.S.C. 102(b) as being anticipated by Duyvesteyn (US 6440383).

Duyvesteyn teaches the processing of aqueous titanium solutions to a TiO₂ rutile pigment. An aqueous titanium chloride or titanium oxychloride solution is prepared (Column 2 Lines 1-5), the solution is evaporated at preferably 200 to 250°C, eg by spray drying, and the resulting TiO2 is calcined (Column 3 Lines 50-57). The spray hydrolysis produces hollow thin-film spheres or parts of spheres having a diameter in the range of about 1 to about 100 microns (Column 3 Lines 60-67). The calcination temperature lies between 450 and 1100°C (Column 4 Lines 17-33), calcination duration is between 20 min and 80 hrs. Following calcination, the TiO2 is milled and washed (Column 4 Lines 49-60). Additionally, chemical control and seeding agents for control of physical and mineralogical characteristics may be introduced in minor quantities into the titanium solution, such as chloride salts of lithium, sodium, potassium or tin (Column 3 Lines 15-32). Since all other process features are identical, it is regarded as implicitly disclosed, that an open network of rutile crystals will result, that a brookite phase will be formed as a intermediate during calcination, and that the crystallites will have a particle size as claimed in claims 37 to 39. Duyvesteyn teaches recycling of the aqueous salt solution (Figure 2)

Application/Control Number: 10/712,768

Art Unit: 1754

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 9-11, 23-24, and 27-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Duyvesteyn (WO 01/00530) as applied to claims 1-8, 12-22, 25-26, 29-43 above, and further in view of Duyvesteyn (WO 01/00530).

Duyvesteyn does not expressly state the ratio of the chloride salts as claimed in claims 9 to 11, the calcining is conducted at a temperature less than 400 degrees C, or the calcinations time is less than about one minute. However, it is well settled that determination of optimum values of cause effective variables such as these process parameters is within the skill of one practicing in the art. In re Boesch, 205 USPQ 215 (CCPA 1980).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Fiorito whose telephone number is (571)272-7426. The examiner can normally be reached on 9am - 6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman can be reached on (571) 272-1358. The fax phone

Art Unit: 1754

number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571/272-1000
